

1. What will be the output of the following code?

```
print(type(5))
```

- a) <class 'float'> b) <class 'int'> c) <class 'str'> d) <class 'bool'>

2. Which of the following is NOT a valid Python data type?

- a) int b) float c) real d) bool

3. What is the output of the following code?

```
x = 10
```

```
y = 3
```

```
print(x // y)
```

- a) 3.33 b) 3 c) 4 d) Error

4. Which operator is used for exponentiation in Python?

- a) ^ b) ** c) exp() d) //

5. What will the following expression evaluate to?

True and False or True

- a) True b) False c) None d) Error

6. What is the correct way to take input from a user in Python 3?

- a) input("Enter: ") b) scan("Enter: ")

- c) get("Enter: ") d) read("Enter: ")

7. What data type does input() return by default?

- a) int b) float c) string d) bool

8. Which of these is a valid application of Python?

- a) Web Development b) Machine Learning

- c) Game Development d) All of the above

9. Which of the following is a comparison operator in Python?

- a) = b) == c) := d) !=

10. What will be the result of this code?

```
a = input("Enter a number: ")
```

```
print(a * 2)
```

If user enters 5

- a) 10 b) 55 c) Error d) 25

B---2-Mark Questions

5 × 2 = 10 Marks

1. What is the difference between = and == operators in Python?

2. Write a Python statement to take a float input from the user and display it.

3.What data type is returned by the input() function? How can you convert it to an integer?

4.List any two applications of Python in real-world domains.

5.What is the output of this code? Explain.

```
print(7 % 3)
```

C-6 marks

1.Write a Python program that takes a string input from the user and prints it repeated 5 times using operators.

2.Input an integer and a float number from the user, then print their sum and the type of result.

3.Write a program to input a number and display:

Its double, square, and cube (using operators only)

4.Get integer input for variable a,b,c. multiply all 3 variables(a*b*c)

add all 3 variable(a+b+c) and divide the multiplied value by added values print it.

sample input:

2

3

4

sample output: 2.6

5.Get input for variable name,score,department

Get score for 100;

divide 100/10

sample input:

Nanisha

80

computer

sample output:

"My Name is Anna"

"My score is 8.0"

"My Department is computer"
